

# K-Pipe™ - Designed specifically for K-Line™ Irrigation

## What is K-Line™?

- K-Line™ is a flexible hose line sprinkler system originally designed for irrigation. However, the low application rate makes the K-Line™ system well suited to effluent distribution. At the heart of the system is a series of tough plastic pods protecting a sprinkler, firmly attached to special K-Line™ K-Pipe™.
- K-Line™ provides an excellent method of liquid dispersal options from the many and varied sources.
- K-Line™ systems are all designed to operate at low pressure.
- K-Line™ provide a number of product choices which gives you maximum flexibility of a customised effluent dispersal system for your farm.
- K-Line™ will suit any paddock shape, size or terrain.
- K-Line™ is easily moved by any quad-bike or farm vehicle.
- K-Line™ is a low application rate system.

## K-Line™ is the ideal irrigation system for:

- General irrigation
- Effluent
- Orchards
- Broadacre/vegetable crops

**K-Pipe™ is striped to easily identify that this is K-Lines™ best pipe system and also to ensure that the pipe is not twisted before installation. If the stripe is always 'up' then you'll know!**

## Features

Because K-Pipe™ is relatively thick at the oval section, it resists strongly to 'kinking' and wear and tear.

K-Pipe™ is made from specially derived PE material that enables torque not to be transmitted between pods but to still resist pressure and pull loads.

## Benefits

- Designed specifically for K-Line™ Irrigation
- Addresses the vigorous shifting of K-Line™
- Not about pressure rating but about performance
- The lettering on the pipe is at 1 metre spacing to ease installation
- Selection of sizes - 32, 40, 45 & 63mm wide
- Tough
- Resilient

Stripes at the top for correct positioning.
